

WERATEDOGS

INSIGHTS AND VISUALISATIONS

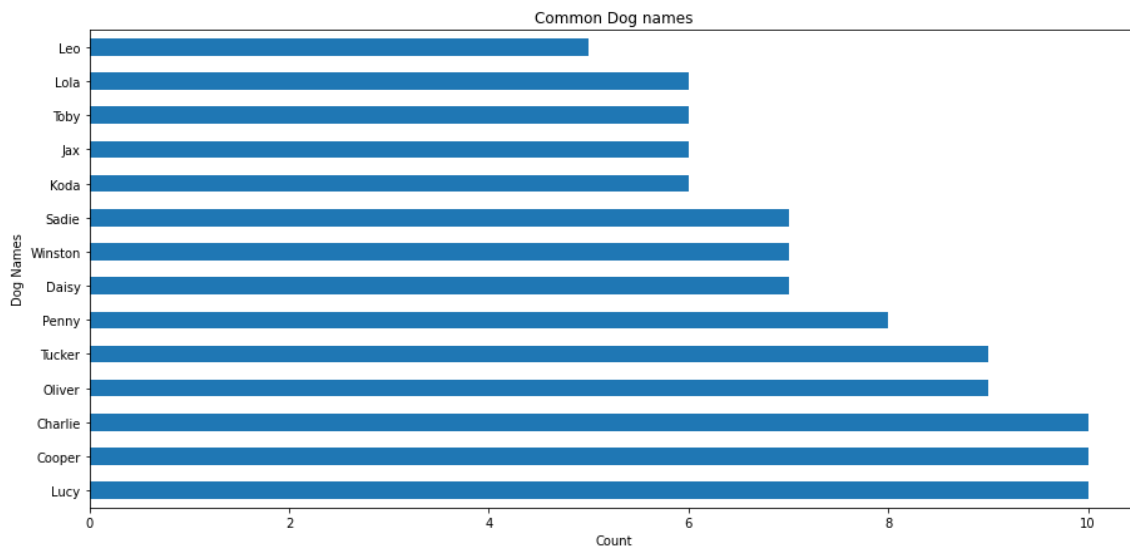

The dataset that has been analysed and visualised is the tweet archive of Twitter user @dog_rates, also known as WeRateDogs. WeRateDogs is a Twitter account that rates people's dogs with a humorous comment about the dog. These ratings almost always have a denominator of 10. The numerators, though? Almost always greater than 10. 11/10, 12/10, 13/10, etc. Why? Because "they're good dogs Brent." WeRateDogs has over 4 million followers and has received international media coverage.

WeRateDogs downloaded their Twitter archive and sent it to Udacity via email exclusively for use in this project. This archive contains basic tweet data (tweet ID, timestamp, text, etc.) for all 5000+ of their tweets as they stood on August 1, 2017.

After Gathering, Assessing and Cleaning the data for the Twitter_archive, I analysed and visualized data for some insights that will be shown and explained below.

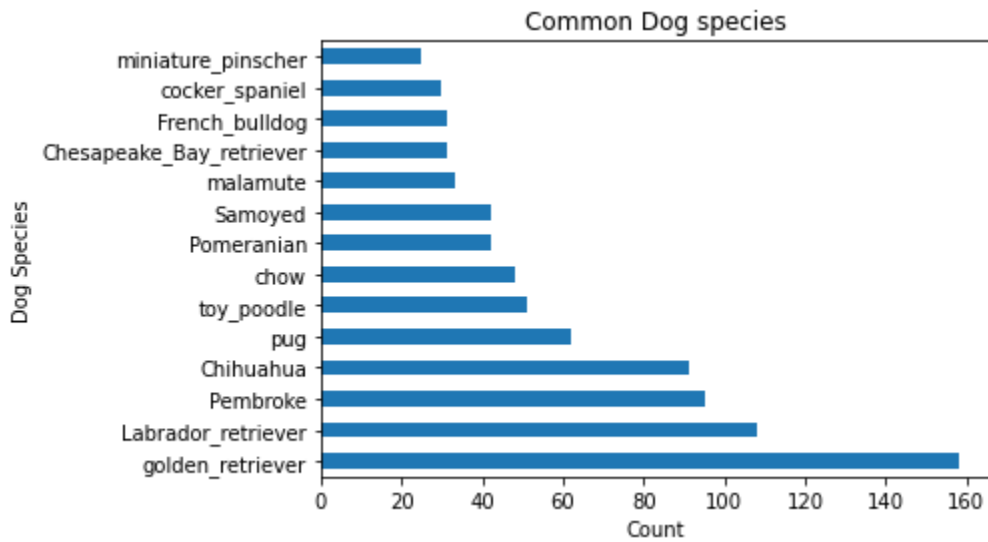

The following questions were answered:

1. What dog name is used the most?

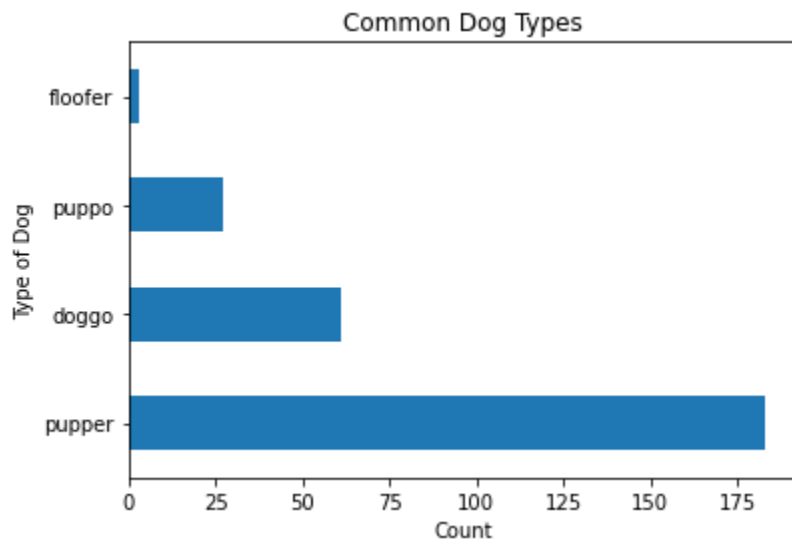

From the bar graph above, we can see that the most common dog names are Lucy, Cooper and Charlie and the least used being Leo.

2. What is the most common dog species?

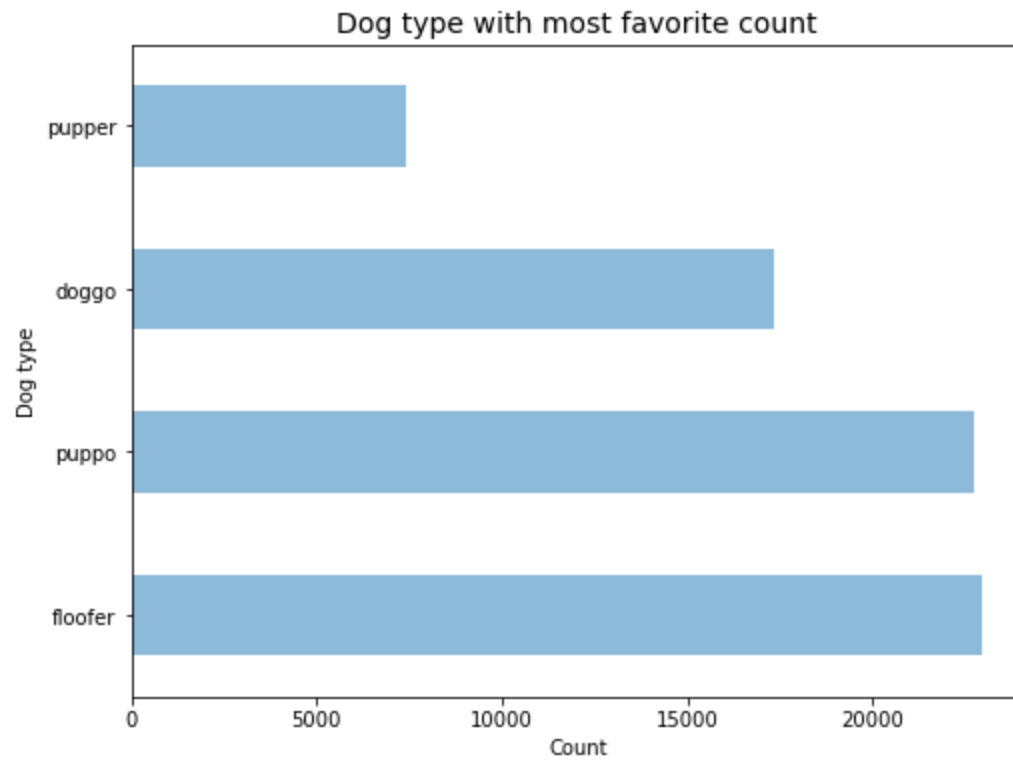

From the bar graph depiction, the golden retriever's the most common dog species and the least common is miniature_pinscher.

3. What is the most common dog type?

The most common dog type as shown by the bar graph is the Pupper and the least is Floofer.

4. Which dog species has the most favorite count?

The dog type with the most favorite counts as shown by the bar graph above is the floofer and the least is pupper.
